

Because the curriculum and instructional methods at St. John's differ from those at most colleges and universities, the Admissions Committee would like to learn more about you than grades and test scores alone can reveal. The following topics have been designed to give you an opportunity to write fully and freely about yourself and to tell us, in your own words, how you might benefit from the program at St. John's. Your essays will be read carefully by the members of the Admissions Committee, but we realize that you may be under academic or other pressures, and we do not expect perfection.

We ask all applicants to address topics I through 3. Successful applicants usually write a total of 5-10 double-spaced, typewritten pages in their response to these three topics. Topic 4 is optional.

- I. Explain in detail why you wish to attend St. John's College; please evaluate the strengths and weaknesses of your formal education to date.
- 2. Respond to both parts: (a) Describe your reading habits and your experience with books. (b) Choose some book that has been important in shaping and deepening your thoughts. Discuss a single aspect of it (not the book as a whole) that you consider particularly significant.
- 3. Select some experience from which you have derived exceptional benefit and describe it, explaining its value to you.
- 4. Optional. If you wish, provide the Admissions Committee with any additional information that you think is relevant to our consideration of your application. You may wish to discuss your health or family situation, your special talents or hobbies, your religious life, your accomplishments, or your post-college plans.

Note on Manuscript Preparation:

Please use white, unlined paper, $8\frac{1}{2} \times 11$ inches. Answer the questions in order. Use ink or computer. Number your answers and your pages. Use only one side of the paper. You need not begin each new answer on a new page. Proofread carefully for punctuation, grammar, sentence structure, and spelling. We recommend that you either keep a copy of your application or send the original to us via certified mail.

THE ST. JOHN'S PROGRAM

St. John's College believes that the way to a liberal education lies through a direct and sustained confrontation with the books in which the greatest minds of our civilization have expressed themselves and through rigorous exercise in translation, mathematical demonstration, music analysis, and laboratory science.

The books that are at the heart of learning at St. John's stand among the original sources of our intellectual tradition. They are timeless and timely; they not only illuminate the persisting questions of human existence, but also have great relevance to the contemporary problems with which we have to deal. They therefore enter directly into our everyday lives. Their authors speak to us as freshly as when they first spoke. They change our minds, move our hearts, and touch our spirits. What they have to tell us is not something of merely academic concern or remote from our real interests. At St. John's, books are not treated reverently or digested whole; they are dissected, mulled over, interpreted, doubted, often rejected, often accepted. They serve to foster thinking, not to dominate it.

With a faculty-student ratio of 1 to 8, class sizes range from a handful in tutorials, to 18 or 20 in seminars and laboratories and the entire student body for the one weekly lecture. All classes are discussion classes, so that the students participate directly and actively in their own education. Final examinations are oral and individual. Students' tutors – as members of the faculty are

called – meet with them twice a year to evaluate their intellectual performance in their presence and with their help.

The seminar is the heart of the St. John's program. Its business is the discussion of the books. Two tutors preside, but the seminar is almost exclusively student conversation. One tutor begins the seminar with a question on the assigned book, a question to which he or she may have no answer. Thereafter the tutors do more listening than talking. The seminar presupposes that students are willing to submit their opinions to the scrutiny of their colleagues. It requires that everyone's opinion be heard and explored and that every opinion be supported by argument and evidence. The role of the tutors is not to give information or to produce the "right" opinion or interpretation; it is to guide the discussion, keep it moving, define the issues, raise objections, and help the students in every way possible to understand the issues, the authors, and themselves. If the tutors, as they may, take a definite stand and enter the argument, they can expect no special consideration, for reason is the only recognized authority. The aims of the seminar are to ascertain how things are, not how things were; to develop the students' powers of reason and understanding and communicating; and to help them arrive at rational opinions of their own.

In the tutorials the students cultivate the habits of careful analytical study. In the language tutorial, students study foreign languages and translate them into English, compare them with each other and with English, and thus learn something of the nature of languages in general and of their own in particular. Throughout the four years students study language as the discourse of reason through the medium of foreign tongues: Greek in the first two years and French in the last two.

The college believes that mathematics is an integral and necessary part of our understanding of the human intellect and of the world. The mathematics tutorial seeks to give students an insight into the fundamental nature and intention of mathematics and into the kind of reasoning that proceeds systematically from definitions and principles to necessary conclusions. During the four years students study pure mathematics and the foundations of mathematical physics and astronomy.

The music tutorial aims at the understanding of music through attentive listening and through the close study of musical theory and analysis of works of music – of Bach, Beethoven, Mozart, Palestrina, and Stravinsky. Students undertake a thorough investigation of the diatonic system, a study of the ratios of musical intervals, a consideration of melody, counterpoint and harmony, and an investigation of rhythm in words as well as in notes.

In the three-year laboratory program, students consider how measurement and experiment can help to answer certain kinds of fundamental questions about the universe. The students follow the arguments and experiments that can persuade one to believe in things one cannot see – in atoms, in genes. The program weaves together the main themes of physics, biology and chemistry to catch the understanding and insights that are needed, with careful scrutiny of the interplay of hypothesis, theory and observed fact. The college does not subscribe to the sharp separation of scientific studies from the humanities, as if they were distinct and autonomous domains of learning or two separate cultures.

On Friday evening, the entire college assembles for a lecture by a tutor or a visitor. It is the only time a lecture is given. Afterward, the lecturer submits to prolonged questioning by students and faculty. Thus the evening serves two purposes: it inculcates in the students the habit of listening steadily and attentively to the exposition of a perhaps unfamiliar subject, and it gives them the opportunity to exercise their dialectical skills in a setting different from the classroom.

THE COLLEGE

The college has an intellectual climate. It is a cohesive community in which students are responsive to one another. Work and play are not polarized; extracurricular activities supplement the curriculum. Social life is informal; there are no sororities or fraternities. Facilities are available for almost any sport, and most students participate in intramural sports. Many are involved in student government, publications, dramatics, special-interest groups; students find their own interests and cultivate them to the extent they choose. But what goes on outside the classroom assumes much of the character of what happens inside; it is pursued with a sense of purpose and with the active participation of the students.

THE STUDENTS

St. John's students are intellectually alive. They habitually read books and value good talk; otherwise they fit no pattern and come from all over the country. About 65 percent of them come from public schools. All students must enter as freshmen, and about a fourth of every freshman class are students who have had one, two or even three years of college work elsewhere. Attracted by the unique program that St. John's offers, they are willing to spend the additional time to get this education.

ADMISSION

Criteria for admission are largely intellectual and academic, although any activities showing initiative and drive will strengthen an application. The academic record is important, as is the written application, which is usually 5 to 10 pages and sometimes runs to 20 or more. The letters of reference are carefully read for evidence that the applicant has the maturity, self-discipline, ability, energy and initiative to succeed in the program. There are no minimums for grades or test scores, and both may be made irrelevant by the pages that the student writes. There is no application fee. Applicants are judged on their own merits, not by comparison with others. New students begin as freshmen. Each year a handful enter directly from the eleventh grade. An interview is desirable but is required only in special cases.

THE ST. JOHN'S PROGRAM

St. John's College believes that the way to a liberal education lies through a direct and sustained confrontation with the books in which the greatest minds of our civilization have expressed themselves and through rigorous exercise in translation, mathematical demonstration, music analysis, and laboratory science.

The books that are at the heart of learning at St. John's stand among the original sources of our intellectual tradition. They are timeless and timely; they not only illuminate the persisting questions of human existence, but also have great relevance to the contemporary problems with which we have to deal. They therefore enter directly into our everyday lives. Their authors speak to us as freshly as when they first spoke. They change our minds, move our hearts, and touch our spirits. What they have to tell us is not something of merely academic concern or remote from our real interests. At St. John's, books are not treated reverently or digested whole; they are dissected, mulled over, interpreted, doubted, often rejected, often accepted. They serve to foster thinking, not to dominate it.

With a faculty-student ratio of 1 to 8, class sizes range from a handful in tutorials, to 18 or 20 in seminars and laboratories and the entire student body for the one weekly lecture. All classes are discussion classes, so that the students participate directly and actively in their own education. Final examinations are oral and individual. Students' tutors – as members of the faculty are

called – meet with them twice a year to evaluate their intellectual performance in their presence and with their help.

The seminar is the heart of the St. John's program. Its business is the discussion of the books. Two tutors preside, but the seminar is almost exclusively student conversation. One tutor begins the seminar with a question on the assigned book, a question to which he or she may have no answer. Thereafter the tutors do more listening than talking. The seminar presupposes that students are willing to submit their opinions to the scrutiny of their colleagues. It requires that everyone's opinion be heard and explored and that every opinion be supported by argument and evidence. The role of the tutors is not to give information or to produce the "right" opinion or interpretation; it is to guide the discussion, keep it moving, define the issues, raise objections, and help the students in every way possible to understand the issues, the authors, and themselves. If the tutors, as they may, take a definite stand and enter the argument, they can expect no special consideration, for reason is the only recognized authority. The aims of the seminar are to ascertain how things are, not how things were; to develop the students' powers of reason and understanding and communicating; and to help them arrive at rational opinions of their own.

In the tutorials the students cultivate the habits of careful analytical study. In the language tutorial, students study foreign languages and translate them into English, compare them with each other and with English, and thus learn something of the nature of languages in general and of their own in particular. Throughout the four years students study language as the discourse of reason through the medium of foreign tongues: Greek in the first two years and French in the last two.

The college believes that mathematics is an integral and necessary part of our understanding of the human intellect and of the world. The mathematics tutorial seeks to give students an insight into the fundamental nature and intention of mathematics and into the kind of reasoning that proceeds systematically from definitions and principles to necessary conclusions. During the four years students study pure mathematics and the foundations of mathematical physics and astronomy.

The music tutorial aims at the understanding of music through attentive listening and through the close study of musical theory and analysis of works of music – of Bach, Beethoven, Mozart, Palestrina, and Stravinsky. Students undertake a thorough investigation of the diatonic system, a study of the ratios of musical intervals, a consideration of melody, counterpoint and harmony, and an investigation of rhythm in words as well as in notes.

In the three-year laboratory program, students consider how measurement and experiment can help to answer certain kinds of fundamental questions about the universe. The students follow the arguments and experiments that can persuade one to believe in things one cannot see – in atoms, in genes. The program weaves together the main themes of physics, biology and chemistry to catch the understanding and insights that are needed, with careful scrutiny of the interplay of hypothesis, theory and observed fact. The college does not subscribe to the sharp separation of scientific studies from the humanities, as if they were distinct and autonomous domains of learning or two separate cultures.

On Friday evening, the entire college assembles for a lecture by a tutor or a visitor. It is the only time a lecture is given. Afterward, the lecturer submits to prolonged questioning by students and faculty. Thus the evening serves two purposes: it inculcates in the students the habit of listening steadily and attentively to the exposition of a perhaps unfamiliar subject, and it gives them the opportunity to exercise their dialectical skills in a setting different from the classroom.

THE COLLEGE

The college has an intellectual climate. It is a cohesive community in which students are responsive to one another. Work and play are not polarized; extracurricular activities supplement the curriculum. Social life is informal; there are no sororities or fraternities. Facilities are available for almost any sport, and most students participate in intramural sports. Many are involved in student government, publications, dramatics, special-interest groups; students find their own interests and cultivate them to the extent they choose. But what goes on outside the classroom assumes much of the character of what happens inside; it is pursued with a sense of purpose and with the active participation of the students.

THE STUDENTS

St. John's students are intellectually alive. They habitually read books and value good talk; otherwise they fit no pattern and come from all over the country. About 65 percent of them come from public schools. All students must enter as freshmen, and about a fourth of every freshman class are students who have had one, two or even three years of college work elsewhere. Attracted by the unique program that St. John's offers, they are willing to spend the additional time to get this education.

ADMISSION

Criteria for admission are largely intellectual and academic, although any activities showing initiative and drive will strengthen an application. The academic record is important, as is the written application, which is usually 5 to 10 pages and sometimes runs to 20 or more. The letters of reference are carefully read for evidence that the applicant has the maturity, self-discipline, ability, energy and initiative to succeed in the program. There are no minimums for grades or test scores, and both may be made irrelevant by the pages that the student writes. There is no application fee. Applicants are judged on their own merits, not by comparison with others. New students begin as freshmen. Each year a handful enter directly from the eleventh grade. An interview is desirable but is required only in special cases.
